■ WELKOM CAMPUS

SRC

As we usher into the new era of slowly moving towards the old normal of face-to-face teaching and learning guided by the lessened covid regulation and the decrease in death and infections as we are nearing the defeat of Covid 19.

Governance

In giving the broader picture as to how the institution is like. I would like to paint it that our institution is a multifaceted institution with dual campuses and multi-layered discourses which shapes and sharpens the direction of the institution. In which the other campus is what we call a former white institution and the other as a former black institution.

Considering the structural base of the institution we relatively consider the institution as stagnant and fixed in which it does not bear and warrant any efficient and effective, and smooth running of the institution. In brief terms, it (cut) does not inspire any sense of growth (Administratively, financially and infrastructurally) therefore the impasses which are naturally married to one another needs to be dissected for the new order to emerge, Decentralization of Power.

- Poor Decision-Making Powers (Incapacity)
- Secondary Appointments
- Executive Management
- Infrastructure(Which largely affects access and intake) it has been noted that the welkom Campus until this day can not admit more than 1000 students for first years into various courses.

This on its own creates a sever problem for us as the current leadership due to the large intake of pool applications

Proposed way forwards is:

Decentralization of Power as a way to: Redress and Equity

Administration

Administration is the hub and backbone of any institution and organisation, once it gets to be flawed and messed up it weakens the enter structure of the organization. That's an extend in which as the SRC regards the existence and value administration. This component need not to be compromised in any way in so far as the mission statement, vision and objective of any organization is concerned. However, we encounter a very opposite experience in our campus and institution at large due to:

- Reluctancy and incapacity
- Systems in place:

AGU Systems

.ICT – Ethuto

Student Portal

Admissions and Registration

Readiness

- Barriers of Annual backlogs
- On Campus lack of staff
- Management not being precise on decisions
- Covid 19 Pandemic {Vaccination}

Finances

As we are still awaiting the Nsfas guidelines we do anticipate that all financially deserving students will be assisted in terms of financial assistance. From appeals that we always have a problem annually as the responses will be late and not cater for students in time. It needs to be highlighted that our students would do need prompt fast responses as funding affects their academics

- Challenges ranging from 2017 of close up projects (close down and close up)
- NBA generated students
- The institution not being to submit data to NSFAS in time this being Registration Templates and results of students affecting our students funding badly
- allowances not being paid in time to students
- incapacity of Financial Personnels
- A need of a permanent CFO

Majority of our submissions re intertwined with that Presented by the SRC bloemfontein Campus
