SLAs	Service Level Agreements
UN	United Nations

## Board Chairperson's Statement

The Council for Geoscience (CGS) presents this strategy to affirm the refocus of the functions of the organisation to its legislatively prescribed mandate. This refocus of the CGS strategy was primarily determined to provide a framework that seeks to optimise the delivery of the CGS programme (i.e. the integrated and multidisciplinary geoscience mapping programme at a scale of 1:50 000), which is sufficiently aligned with the intent of “science applications responding to current and future societal challenges” as well as national imperatives.

This document presents the Strategic Plan of the CGS for the Medium Term Strategic Framework (MTSF) period 2019–2024, having reviewed past performances and chronicled inherent challenges in order to streamline the strategic responses of the organisation. The document confirms the strategic focus of the CGS.

The impact and outcomes for this Strategic Plan support the delivery of the mandate guided by a rigorous strategic planning process and are detailed in Part C of this document. Part B of the document provides the strategic context of the CGS as it relates to the new MTSF period (2019 -2024) and reflects the adapted strategic path that will inform the focus, actions and planned milestones of the CGS. This section provides detail and further clarity on the revised operating model of the CGS to reflect more effective alignment and integration of functions to support the execution of its mandate.

---

Dr Humphrey Mathe

Chairperson of the Board: CGS

## Chief Executive Officer's Statement

Geoscientific studies have brought a better understanding of the unique geology of South Africa. This geology is characterised by, amongst others, Archaean greenstone belts, the Witwatersrand gold basin, the Vredefort impact structure, the Bushveld Igneous Complex and the Karoo Basin. The country also has a diverse marine geology with the potential of unlocking the Blue Economy. The palaeontological heritage of South Africa includes a repository of dinosaur fossils and the palaeo-anthropological site of Maropeng, known as the "Cradle of Humankind".

South Africa has a vast heritage of mineral and petroleum resources endowment both onshore and offshore. These resources have largely moulded the country's mining industry and supported the nation's energy security. The gold resources have been mined for over a century. The bulk of this gold is derived from the Witwatersrand Basin, which is currently being mined at various depths up to 4 000 m. The geological community has developed various models to gain an in-depth understanding of the basin and its development.

Today, South Africa extracts over 54 different types of minerals, which contribute to the socio-economic development of the country. The rapid population growth, urbanisation and challenges with respect to climate change are collectively contriving to high projections of, amongst others, energy, water and land-use consumption demands as well as environmental stewardship. This global population growth also has profound implications for human health, global food security and the environment as well as skills shortages, geohazards and the risks inherent to exaggerated inequality, poverty and unemployment. The geoscientific applications are critical in addressing the above-mentioned challenges.

The African continent is endowed with natural resources, however, it lags significantly behind other continents in terms of geoscientific mapping. This presents an opportunity for geoscience institutions including the CGS to contribute to the prosperity of not only South Africa, but of the continent at large. The strategic reorientation of the CGS aims to:

- Refocus on an integrated and multidisciplinary geoscience mapping exercise that will deliver national coverage at a scale of 1:50 000
- Affirm existing and identify new mineralising systems
- Catalyse the blue economy
- Support the infrastructure programme and deployment of efficient land use
- Support energy and food security initiatives
- Advance a transformational trajectory, in line with the central policy tenet of Government aimed at normalising society in a democratic South Africa
- Create a critical mass of world-class geoscientists
- Effectively implement the geoscience diplomacy programme that places collaboration with key stakeholders at the centre of executing the mandate of the CGS. These stakeholders are both national and international.
- Collaborate with our key stakeholders.

We are delighted to present the Strategic Plan 2020 -2025 of the CGS in support of accelerating the delivery of our mandate, as stated in Geoscience Act No. 100 of 1993 and Geoscience Amendment Act No. 16 of 2010.

This Strategic Plan integrates all aspects of the geosciences and intends to foster enthusiasm in regard to the relevance of these fields to the priorities of South African government, development of South Africa, the African region and the world.

---

**Mr Mosa Mabuza**

Chief Executive Officer: CGS

## Official Sign-Off

It is hereby certified that this Strategic Plan:

- Was developed by the Management of the CGS under the guidance of the Board.
- Considers all the relevant policies, legislation and other mandates for which the CGS is responsible.
- Accurately reflects the impact and outcomes which the CGS will endeavour to achieve over the financial period from **2020/21 to 2024/25**.

Executive Authority

## PART A: OUR MANDATE

### 1. Constitutional Mandate

The **South African Constitution** is the Supreme Law that underpins the democratic dispensation within the Republic of South Africa.

The CGS is listed as a Schedule 3A Public Entity and is established in terms of the Geoscience Act No. 100 of 1993, as amended. This Act enunciates the Constitution in defining the mandate of the CGS. Accordingly, Chapter 10 of the South African Constitution titled Public Administration makes reference to basic values and principles governing public administration requiring that public administration be governed by the democratic values and principles enshrined in the Constitution, including the following principles:

- a) A high standard of professional ethics must be promoted and maintained.
- b) Efficient, economic and effective use of resources must be promoted.
- c) Public administration must be development-oriented.
- d) Services must be provided impartially, fairly, equitably and without bias.
- e) People's needs must be responded to, and the public must be encouraged to participate in policy-making.
- f) Public administration must be accountable.
- g) Transparency must be fostered by providing the public with timely, accessible and accurate information.
- h) Good human-resource management and career-development practices, to maximise human potential, must be cultivated.
- i) Public administration must be broadly representative of the South African people, with employment and personnel management practices based on ability, objectivity, fairness and the need to redress the imbalances of the past to achieve broad representation.

### 2. Legislative and policy mandates

**Legislative Mandate: The Geoscience Act (Act No. 100 of 1993)** and the subsequent Geoscience Amendment Act (Act No. 16 of 2010) establish the CGS, which is listed as a Schedule 3A Public Entity in terms of the Public Finance Management Act (PFMA) (Act No. 1 of 1999). The mandate of the CGS includes, albeit not limited to:

- I. The **systematic onshore and offshore** geoscientific mapping of South Africa.
- II. **Undertake geoscientific research and related technological development.**
- III. The **collection and curation** of all geoscience data and act as a national geoscience repository.
- IV. The **compilation and development of comprehensive and integrated geoscience knowledge** and information, such as geology, geophysics, geochemistry, engineering geology, economic geology, geochronology, palaeontology, geohydrological aquifer systems, geotechnical investigations, marine geology, geomagnetism, seismology, geohazards, environmental geology and other related disciplines.
- V. **Bring to the notice of the Minister any information in relation to the prospecting for and mining of mineral resources**, which is likely to be of use or benefit to the Republic.
- VI. Promote the search for and the exploitation of any minerals in the Republic.
- VII. Study (i) the **distribution and nature of mineral resources** and (ii) geoenvironmental aspects of past, current and future mineral exploitation.
- VIII. Study the use of the surface and the **subsurface of the land and the seabed**, and from a geoscientific viewpoint advise government institutions and the general public on the judicious and safe use thereof with a view to facilitate sustainable development.

- IX. Develop and maintain the **national geoscientific library**, the national geoscientific information centre, the **national borehole core depository**, the **national geophysical and geochemical test sites**, the **national geoscience museum**, the national seismological network and the national geoscience analytical facility.
- X. Conduct investigations and render prescribed specialised services to public and private institutions.
- XI. Undertake –
  - a) research of its own accord;
  - b) research on **behalf of the State** or **any other government institution**, or on behalf of **any person or institution**, or support such research financially; or
  - c) **any reconnaissance operation, prospecting** and other related activities with a view to **attracting investment to the mineral resource sector**; and
  - d) do anything that is necessary for or conducive to the achievement of the said objects.
- XII. Render geoscience knowledge services and **advice to the State**.

In terms of the amendments made to the Geoscience Act, sections 4(c), 4(eA), 4(f), 5(b) and 8 that deal with, inter alia, the custodianship of geoscientific information, the review and evaluation of geotechnical reports, the maintenance of certain national geoscientific facilities and the appointment of a Geotechnical Appeal Committee were held in abeyance. Synchronously, the Mineral and Petroleum Resources Development Act (MPRDA) explicitly provides for the CGS to receive, validate and curate geological information from prospect rights and mining rights holders as part of their regulatory compliance requirement. These amendments constitute organic growth and significantly broaden the mandate of the CGS.

**The Policy Mandate:** The Minerals and Mining Policy for South Africa (1998) affirms the CGS as a science council that supports research and development underpinning the sustainable development of the mining industry. This further enunciates the Constitutional mandate, as elaborated in the founding prescripts of the CGS. This Strategic Plan of the CGS primarily gives effect to the Policy Mandate.

### 3. Institutional policies and strategies governing the five-year planning period

In addition to the legislative mandate, the CGS Strategic Plan also implements other national policies and frameworks including, but not limited to, the following:

#### 3.1 National Development Plan (NDP) 2030

In realising the urgent need to address the national imperatives, the CGS ensures that its business model and all its activities address the following strategic national outcomes as per the NDP 2030.

- **Decent employment through inclusive economic growth:** Delivering spatial geoscience information and services that attract local and international investment to develop mineral and upstream petroleum resources.
- **A skilled and capable workforce to support an inclusive growth path:** Build capacity in respect of geoscientific, administrative and managerial/leadership skills while also developing innovative outputs, systems and services.
- **An efficient, competitive and responsive economic infrastructure network:** Geoscience information and services input to infrastructure development in support of South Africa's economic development of mineral and upstream petroleum resources.
- **Vibrant, equitable and sustainable rural communities with food security for all:** The provision of geoscientific information that enables agricultural development and groundwater exploration, amongst others.

- **Environmental assets and natural resources which are well protected and continually enhanced:** Conducting research regarding, inter alia, Acid Mine Drainage (AMD) and Carbon Capture and Storage (CCS) technologies and establishing environmental baselines for possible future shale gas development.
- **An efficient, effective and development-oriented public service and an empowered fair and inclusive citizenship:** Strengthening the CGS to optimise delivery of the mandate and effect the transformative programme of Government.

### 3.2 Government's Medium Term Strategic Framework (MTSF) 2019-2024

The MTSF 2019-2024 reflects the Government-wide set of delivery commitments made in an administrative cycle of five years. This framework delineates strategic areas of focus for Government entities to dedicate resources and effort in order to plan, implement and fulfil the afore-mentioned commitments, all of which contribute to the overarching National Visions popularly known as the NDP. In this regard, the CGS develops its strategy as guided by the MTSF 2019-2024 and supported by an Annual Performance Plan (APP) which, incorporates relevant **actions, indicators and targets** that seek to incrementally support the national developmental imperatives. The strategy gives effect to six of the seven MTSF 2019-2024 priorities, which include:

- A capable, ethical and developmental state
- Economic transformation and job creation
- Education, skills and health
- Spatial integration, human settlements and local government
- Social cohesion and safe communities
- A better Africa and World

The CGS strategy and its implementation plans (e.g. APP) addresses the **cross-cutting focus areas** of **women, youth** and **persons with disabilities**.

### 3.3 Government's Revised Medium Term Strategic Framework (MTSF) 2019-2024

The implementation of the MTSF 2019-2024 (see section 3.2 above) was largely disrupted by the outbreak of the COVID-19 pandemic and the declaration of a National State of Disaster on the 15 March 2020. This necessitated the Government to reprioritise its plans and budgets in response to the pandemic, which has had a devastating impact on the health, social and economic aspects of the lives of South Africans. The MTSF 2019-2024 was therefore revised to include critical interventions that are part of government relief and recovery efforts.

The Revised MTSF 2019-2024 continues to reflect government's plan of action over the remaining term of the sixth administration (FY2021/22 to 2023/24). The Revised MTSF 2019-2024 also prioritises government commitments to prevail over the coronavirus pandemic and to work towards recovery. These commitments were outlined in the 2021 State of the Nation Address and include the following focus areas:

1. To defeat the coronavirus pandemic
2. To accelerate South Africa's economic recovery [e.g. through the implementation of Economic Reconstruction and Recovery Plan (ERRP)]
3. To implement economic reforms to create sustainable jobs and drive inclusive growth; and
4. To fight corruption and strengthen the capacity of the State.

### 3.4 The South African Economic Reconstruction and Recovery Plan

The ERRP of 2020 aims to build a new economy and unleash South Africa's true potential. The overarching goal of the plan is to create sustainable, resilient and inclusive economy. The ERRP focuses on the following priority areas:

- Energy security.
- Industrial base to create jobs.
- Mass public employment programme.
- Infrastructure development.
- Macro-economic interventions.
- Green economy.
- Food security.
- Reviving the tourism sector.

The CGS strategy is developed to support the priority areas listed in the ERRP.

### **3.5 Department of Mineral Resources and Energy (DMRE) Strategic Priorities and Outcome-Oriented Goals**

Further to the NDP and MTSF, the objectives of the CGS have been formulated to also support the objectives of the DMRE, whose core focus revolves around regulation, transformation and promotion of the minerals and energy sectors as well as provision of sustainable and affordable energy for growth and development to all South Africans.

Other objectives of the DMRE to which the CGS aligns and supports include, but not limited to contributing to:

- A just transition to a low carbon economy
- Unlock South Africa's high potential mineral and energy resources
- Diversify supply of mineral resources in support of both mining and energy sectors
- Increased investment in mineral and petroleum sector, onshore and offshore
- Increase in South Africa's share of the global minerals and energy market
- Increase in South Africa's share of the Global exploration budget
- Diversify energy sources through implementing IRP2019
- Increased infrastructure investment by both public and private sectors
- Inclusive, equitable and competitive exploration
- Ensure sufficient and relevant skills in the mining and energy sector

In furtherance of sustainable mining, the CGS also undertakes environmental studies that seek to attain appropriate stewardship in the sector, in accordance with the Constitutional prerogatives. In this regard, studies on Acid Mine Drainage (AMD) as well as strategic mine water management programmes are undertaken to support the DMRE.

The contribution towards upliftment of rural communities typically located in distal geographic areas remains one of the focal points of Government. Interventions in geosciences have been developed to impact the intended development of communities.

### **3.6 Department of Science and Innovation (DSI) Strategic Priorities and Outcome-Oriented Goals**

The strategic priorities and outcome-oriented goals of the DSI mainly focuses on research and a technology development environment that supports attainment of the national socio-economic development imperatives. Accordingly, the afore-stated goals are underpinned by a deliberate investment in the generation of knowledge and human capital development through direct investment as well as partnerships. The CGS, as a science council, is one of the key entities that, through its functions, collaborates with and supports the work of the DSI and the 2019 White Paper on Science, Technology and Innovation.

In this regard, the applications of *Fourth Industrial Revolution (4IR)* and *Artificial Intelligence (AI)* are finding expression in the geosciences in furtherance of improving service delivery and significantly enhancing the response to addressing societal challenges. The CGS welcomes the establishment of the 4IR as chaired by the President of the Republic of South Africa.

### **3.7 Relevant court rulings**

No court rulings affecting the CGS.

## PART B: OUR STRATEGIC FOCUS

### 4. Vision

The vision of the CGS is:

A prosperous and transformed society enabled by geoscience solutions

### 5. Mission

The mission of the CGS is to contribute to a prosperous South Africa by:

- Providing integrated, systematic and thematic maps and conducting research on the onshore and offshore geology of South Africa, as mandated, to:
  - Facilitate mineral, energy and agricultural development;
  - Contribute to the assessment and sustainable management of mineral, geohydrological and geoenvironmental resources;
  - Support infrastructure development.
- Acting as a national advisory authority on geoenvironmental pollution.
- Providing an information repository and delivery platform that facilitates actionable decisions and the accessibility of relevant information by relevant stakeholders.
- Discharging the mandate in a manner that supports transformation and national developmental imperatives.

### 6. Values

The CGS is guided by a core set of values:

- **Innovation:** Generating and implementing novel ideas and outputs that create value
- **Diversity:** Embracing an inclusive culture that upholds transformation and recognises contributions from all stakeholders
- **Excellence:** Striving to excel in every aspect of our business
- **Accountability:** Fostering reliability and commitment, taking responsibility and ownership
- **Learning:** Advancing through knowledge creation
- **Safety, Health, and Environment:** Prioritising the health and safety of all employees and stakeholders concomitant with environmental stewardship
- **Transparency:** Providing services impartially, fairly, equitably and transparently.

## 7. Situational analysis

### 7.1 External Environmental Analysis

#### 7.1.1 Macro Socio-Economic Trends — South Africa

<sup>1</sup>Over the last two decades, South Africa has accomplished enormous social progress by bringing to millions of citizens access to key public services, notably education, health, housing and electricity. Enrolment in primary schools is universal for both boys and girls. <sup>2</sup>Between 2002 and 2019, the proportion of households with access to an improved source of water increased by less than four percentage points (growing from 84,4 percent to 88,2 percent ). The number of households linked to the supply of electricity from the mains rose from 76.7% in 2002 to 85.0% in 2019. (Statistics South Africa, 2019).

<sup>3</sup>**Figure 1:** South Africa: Real gross domestic product (GDP) growth rate from 2015 to 2025

The COVID-19 pandemic has impaired an economic outlook that is already fragile. <sup>4</sup>In 2020, the South African economy plummeted, reporting an 8% negative growth balance due to the COVID-19 outbreak in year 2020. Growth is expected to pick up in 2021, estimated at 3% of GDP, and steady at 1.54 % in 2022. Unemployment increased from 25.16% to 28.48% in year 2020 (Figure 1)<sup>5</sup>. The youth are particularly hard hit by the economic slowdown, with an unemployment rate of 55.95% in 2020<sup>6</sup>.

<sup>1</sup> OECD Economic Surveys — South Africa

<sup>2</sup> [http://www.statssa.gov.za/?page\\_id=1856&PPN=P0318&SCH=72766](http://www.statssa.gov.za/?page_id=1856&PPN=P0318&SCH=72766)

<sup>3</sup> <https://www.statista.com/statistics/370514/gross-domestic-product-gdp-growth-rate-in-south-africa/>

<sup>4</sup> <https://www.imf.org/en/Countries/ZAF>

<sup>5</sup> <http://www.statssa.gov.za/?p=13633>

<sup>6</sup> <https://www.statista.com/statistics/813010/youth-unemployment-rate-in-south-africa/>

**Figure 2.** South Africa: Unemployment rate from 2010 to 2020<sup>7</sup>

Despite a challenging economic environment and limited fiscal space in South Africa, the government has maintained a highly redistributive policy. Approximately 68% of government spending goes towards social objectives, including education, health, social grants and basic services. Since the beginning of the COVID-19 crisis, the government has decided to augment all social grants and to extend benefits to some uncovered categories such as informal workers. A temporary caregiver grant was also introduced. Moreover, the government has swiftly put in place an income replacement scheme through the Unemployment Insurance Fund. Nonetheless, the COVID-19 pandemic is hitting employment, threatening livelihoods of millions of individuals and affecting social achievements of government policies.

The levels of poverty, unemployment and inequality remain unacceptably high, threatening to reverse the gains of a democratic dispensation over the past 25 years. However, South Africa plans to restart growth, by restoring confidence and opening routes for long-term stable growth. Investment in infrastructure, education and skills is therefore crucial to boost potential growth<sup>8</sup>.

The COVID-19 outbreak and the related containment measures have led to a severe contraction in economic activity. The economy in South Africa is set to recover progressively from recession as sectors sequentially reopen. Owing to the COVID-19 shock, wage and price inflations are likely to remain muted and continue revolving below the Reserve Bank's 4.5 percent inflation target. Inflation is trending down. At 3% in April 2020, inflation stood at a record low since June 2005. Inflation will be contained in the near term due to the collapse in demand, low imported inflation – particularly from oil – and moderate food price pressures<sup>8</sup>.

<sup>7</sup> <https://www.statista.com/statistics/370516/unemployment-rate-in-south-africa/>

<sup>8</sup> OECD Economic Surveys: SOUTH AFRICA, 2020

<sup>9</sup>Figure 3. South Africa: Inflation trend from 2014 to 2025

<sup>8</sup>Fiscal policy reacted cogently to the COVID-19 pandemic. The Temporary Employer/Employee Relief Scheme managed by the Unemployment Insurance Fund has provided income support to around 2 million employees. Social benefits/grants were augmented and two additional grants deployed to cover, in particular, informal workers who never received any kind of social transfers.

Several interventions to improve investor confidence have been proposed, which are critical to reverse weak investment and employment growth. These are also part of the South African Economic Reconstruction and Recovery Plan and include aggressive infrastructure investment, energy security, green economy interventions, support for tourism recovery and growth; employment orientated strategic localization, reindustrialization and export promotion and strengthening food security, amongst others.

### 7.1.2 Mining Industry Overview

Mining companies continued to enjoy the gains in commodity prices, assisted by a weaker rand. The improved profitability resulted in increased gains and distributions to shareholders, corroborated by a near doubling of taxes paid to governments and strong balance sheets. The mining sector again outperformed the JSE All Share Index and even outperformed the global mining <sup>10</sup>

In 2020, total market capitalisation increased to R1,280 billion from R840 billion. This total is a R439 billion (52%) YOY increase from 2019, largely attributed to the increase in market capitalisation of companies within the gold and PGM sectors. Gold and PGM accounted for 80% of the market capitalisation of the companies analysed this year and continue to dominate the sector. <sup>11</sup>

For the year ending June 2020, overall sales increased by 38%. The total revenue generated by the South African mining industry for the year ended 30 June 2020 grew by 4%. This was mainly driven by PGMs, gold and iron ore, which saw increases in revenue for the 12-month period. PGM generated the largest portion of revenue (28%), demonstrating a 56% increase from the previous year, overtaking coal for the first time since 2010. Gold mining companies had an increase of 35% in revenue. Revenue for the 'other mining' segments increased by 7%.

<sup>9</sup> <https://www.statista.com/statistics/370515/inflation-rate-in-south-africa/>

<sup>10</sup> <https://www.pwc.co.za/en/publications/sa-mine.html>

<sup>11</sup> <https://www.pwc.co.za/en/press-room/sa-mine-2020.html>

The SA Mine entities, cash generated from operations after working capital changes increased by 50% from the previous year. The gold and PGM sectors were the largest contributors, each contributing R24 billion to the increase in cash generated from operating activities. Capital expenditure grew with a net increase of 5%.

Companies and investors have increasingly been recognising the importance of prioritising environmental, social and governance (ESG) matters on the corporate agenda.

Hydrogen has long been a topic of discussion in the mining industry. Several transportation projects in the sector have been strongly focused on the use of PGMs in fuel cell catalysts.

Although the entire country has been covered in terms of maps at the scales 1:1 million and 1:250 000, the detailed geological published map coverage of South Africa at 1:50 000 scale remains uncompetitively at 9%. Consequently, the country has fallen out of the global top-ten exploration expenditure against peer jurisdiction whose comparative detailed geological mapping is correlatively highest. The South African Government has re-affirmed its commitment to investment in the implementation of the integrated and multidisciplinary geoscience mapping programme (the IMMP) by the CGS, which seeks to significantly enhance the knowledge and understanding of the geosciences in the country.

### **7.1.3 Global Mining Exploration Trends and cumulative impact of the COVID-19 pandemic in 2020**

Newly released 2020 global exploration budget data from S&P Global Market Intelligence's Corporate Exploration Strategies series<sup>12</sup> shows that while there was renewed positive sentiments in the latter part of 2019, COVID-19 pandemic resulted in reduced exploration spending in 2020.

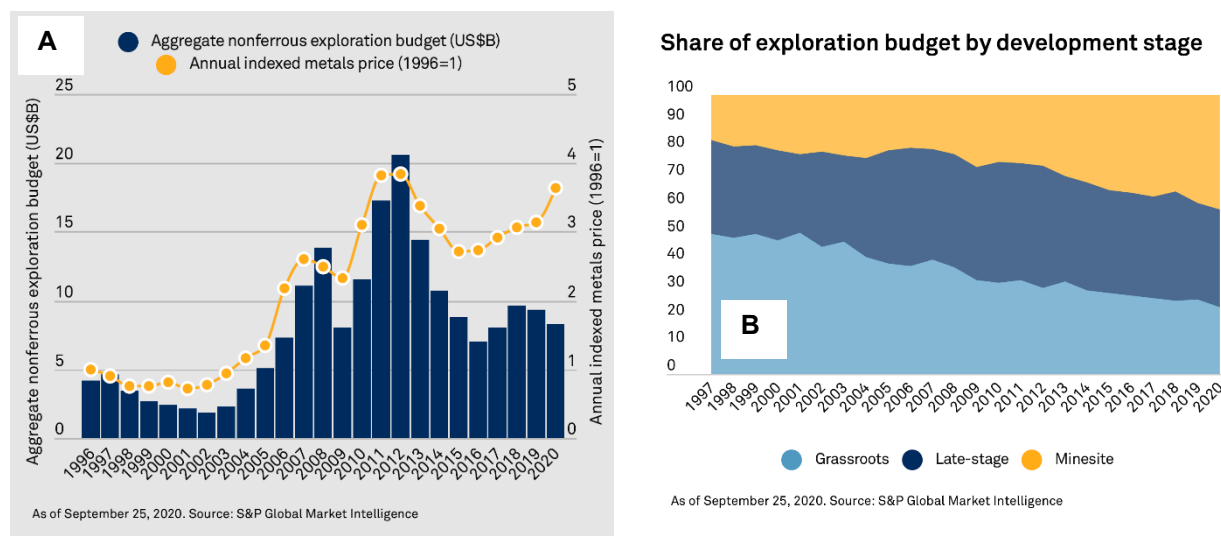

In a survey of 2,500 public and private companies, it was established that in 2020 a global aggregate nonferrous exploration budget was US\$8.3 billion, which increased to US\$8.7 billion if companies spending less than US\$100 000 are included. Gold accounted for 52% or over US\$4.3 billion of the total global exploration budget, followed by copper (21%), lead-zinc (5%) and nickel (4%). COVID-19 pandemic had a disproportionate impact on the exploration in 2020. Regional lockdowns led to difficulties in large-scale exploration efforts broadly, which led to a decline to just over US\$2 billion for grassroots budgets, with late-stage exploration down to US\$2.90 billion and mine site exploration decreasing to US\$3.43 billion (Figure 4).

The energy transition is shaping current trends in the mining industry and sector today, in which the cornerstone is a proliferation of renewable resources. Understanding the drivers of the buildout of renewable generation is key to managing the risks and realizing the opportunities that come together at the intersection of policy, regulation and markets. The evolution also includes broader shifts, such as reducing carbon emissions and deploying advanced technologies that change the way energy users interact with the grid and their local utilities<sup>13</sup>.

---

<sup>13</sup> <https://www.spglobal.com/marketintelligence/en/news-insights/blog/six-trends-shaping-the-industries-and-sectors-we-cover-in-2021>

**Figure 4.** A) Global Aggregate Nonferrous Exploration Budget 2020 and B) a share of exploration budget by development stage<sup>12</sup>.

The importance of State's investment in geosciences to improve South Africa's attractiveness as an exploration jurisdiction cannot be overstated. The CGS has therefore adjusted its plans to concentrate the Geoscience Technical Programme (GTP) to projects that will yield immediate impact to the economic recovery project. To this end, the CGS will be characterising the mineral potential over several base metal prospects in addition to the "minerals of the future" that include Lithium and REE, which will play a critical role in the renewable energy space.

### 7.1.4 PESTEL Analysis

The external environment consists of variables/forces that are outside sphere of influence of the CGS and therefore are not typically within the control of the organisation. These variables shape the context within which the organisation exists and present it with threats and opportunities that have the potential to either retard or stimulate strategic success. The variables include, albeit not limited to diverse factors such as rapid technological change, evolution of policies, the socio-economic climate and energy. The following factors were assessed by means of the PESTEL analysis:

**Figure 5:** PESTEL analysis.

**Political:** The CGS reports to and supports the Ministry of Mineral Resource and Energy (DMRE) in executing its mandate and priorities. The CGS takes direction from the strategic goals of the DMRE in developing its own strategies. As a science council, the CGS also reports on scientific research and innovation to the Department of Science and Innovation (DSI). Other Government policies and priorities such as transformation are central to the normalisation of the longstanding irregularities of society, in keeping with the democratic values of the country. To this end, the CGS subscribes to the transformation agenda in respect of; inter alia, broad-based black economic empowerment, employment equity and economic growth. The timeframe for implementation of the geoscience programmes is often inconsistent with the tenure of the shareholder executive and by extension introduces some vagaries in the priority areas of the incumbent executive.

**Economic:** The COVID-19 pandemic has triggered the deepest economic recession in nearly a century, threatening health, disrupting economic activity, and hurting well-being and jobs<sup>14</sup> in many countries. The slow rate of recovery from the global economic downturn as well as the pandemic has meant that the Government's fiscal strength is accordingly limited. The CGS appreciates this possible constraint, but mitigates it in presenting a strategy that seeks to provide requisite quality data with profound impact on long-term national developmental and investment decisions. Further, the slow

<sup>14</sup> <https://www.oecd.org/coronavirus/en/themes/global-economy>

recovery has the potential to limit Government's ability to fund the delivery of the CGS mandate due to other pressing and competing socio-economic priorities. The growing demand for geoscientific information in Africa, the Middle East and other jurisdictions presents an avenue for the CGS to collaborate with other protagonists in its various fields of expertise and supplement the Government grant.

**Exploration for mineral commodities:** The global budget for nonferrous metals exploration decreased by 11% to an estimated US\$8.7 billion in 2020 from US\$9.8 billion in 2019. Exploration budgets decreased modestly in 2020, due primarily to travel restrictions and lockdowns in response to the COVID-19 pandemic. S&P Global Market Intelligence's survey of 2,500 exploring companies in 2020 revealed that the global aggregate nonferrous budget decreased 10% to US\$8.3 billion year over year. Although uncertainty remains, exploration in 2021 is predicted to reverse the pandemic-induced losses of 2020 and rise 15%-20% year over year<sup>15</sup>. It has been established that jurisdiction with major investment in geoscientific programmes secure a lion's share of the annual exploration budget, while the corollary remains valid. South Africa's share of this budget has shrunk to a fraction of a percent. The President of the Republic has affirmed the importance of the mining industry as a sunshine industry, notwithstanding its long heritage. Accordingly, the Minister of Mineral Resources and Energy has pronounced on measures to increase South Africa's share to 5% in the next five years, including the State's deliberate investment in the geoscience knowledge.

**Social/Cultural:** The CGS, as a science council, takes cognizance of its social and cultural environment and ensures that it responds accordingly. The increased participation and advocacy of society on issues relating to, amongst others, incremental demand for economic growth and jobs, infrastructure development, mineral resources development, energy security as well as the preservation of the natural environment and cultural heritage influence the approach of the CGS and also have the potential to impact on both the profile and the value of services provided by the CGS to society, taking into account the vast disparities in stakeholder expectations.

**Energy Security:** As the global population continues to rise, the demand for cost competitive energy will also rise. Energy security is vital in every society because it is largely the basis for social and economic development, health, food security and poverty alleviation. South Africa's increased demand for cost competitive security of energy has never been more pronounced. In this regard, an energy basket comprising traditional as well as new sources of energy has never been more eminent. This results in unprecedented growth in the demand for alternative minerals that support renewable energy, such as battery minerals, which will result in a renewed search for minerals contributory to these sources of energy. Accordingly, South Africa adopted a low-carbon economic growth trajectory that requires urgent attention to sustainable and cost-effective sources of energy. Such energy sources potential as geothermal energy, battery minerals, uranium/thorium prevalence, coal, etc. are a subject of the programme of the CGS, all of which are located within the context of the climate change paradigm.

In December 2017, the General Assembly of the United Nations (UN) proclaimed 2019 as the International Year of the Periodic Table of Chemical Elements (IYPT2019). The UN recognised the importance of raising global awareness of how chemical elements in the periodic table can promote sustainable development and how their application can provide solutions to global challenges in energy, education, agriculture and health sectors<sup>16</sup>. Clean energy technologies such as wind, solar and batteries rely on a large amounts of minerals and metals (e.g. cobalt, nickel, manganese, lithium, copper and rare-earth metals also known as REEs) to work. <sup>17</sup>Therefore, more demand for the minerals, elements

---

<sup>15</sup> <https://www.spglobal.com/marketintelligence/en/media-center/press-release/global-exploration-budget-fell-11-to-87-billion-in-2020>

<sup>16</sup> <https://iupac.org/united-nations-proclaims-international-year-periodic-table-chemical-elements/>

<sup>17</sup> <https://www.carbonbrief.org/explainer-these-six-metals-are-key-to-a-low-carbon-future>

and metals that make these technologies possible will be sustained. The CGS programmes will also focus on the search for such critical minerals, elements and metals.

**Food Security:** The NDP Vision 2030, SDGs 2030 and Agenda 2063 identify food security as key in addressing both poverty and inequality and make reference to a number of requisite steps to improve food security by including sustainable agriculture, expansion of the use of irrigation, security of land tenure, especially for women, and the promotion of nutrition education. Food security, is however, threatened by various factors such as globalisation, urbanisation, international trade regimes, climate change, and the poor storage and distribution of food.

The strategy of the CGS further focuses on geoscience programmes that will contribute towards land use, groundwater and the environment, all of which are contributory to the national food security programme.

**Technological:** Technological advancement enables the CGS to respond to the expectations and requirements of its stakeholders in order to ensure service delivery. The innovative utilisation of emerging mapping technologies for the gathering of data improves the effectiveness and efficiency of the CGS in delivering on its mandate. The rapid development of technology provides the CGS with major opportunities in the areas of research, innovation, skills development and service delivery.

Investment in scientific research and technological development is a catalytic imperative for innovation. This will enable the organisation to be responsive, competitive and relevant.

The dawn of the Fourth Industrial Revolution presents opportunities for application in the geosciences to enhance data collection accuracy, and improve the speed and quality of data interpretation. The introduction of artificial intelligence and machine learning in geoscience presents opportunities for the CGS to, not only be current, but substantially improve the quality of geoscience outputs in real time.

<sup>18</sup>The President of South Africa established a Presidential Commission on the Fourth Industrial Revolution (4IR) to identify and recommend policies, strategies and plans that are needed to position South Africa as one of the leading countries in the evolution and development of the 4IR. The President indicated that Government would prioritise interventions to take advantage of rapid technological changes. The main focus will be the development of an integrated national strategy and plan to respond to the 4IR to include detailed interventions to be carried out in achieving competitiveness of the key economic sectors, including agriculture, finance, mining, manufacturing, ICT and electronics, and business with science, technology and innovation as a cross-cutting enabler.

**Environmental:** Natural environmental and man-made hazards create a need for geological information and solutions to mitigate these hazards, e.g. infrastructure development on ground that is prone to sinkhole formation, tsunamis, earthquakes, acid mine drainage, groundwater pollution, air pollution and global warming. The natural environmental challenges dictate the programmes and mitigating strategies that the CGS should address.

Changes in climatic conditions, i.e. when conducting fieldwork, will mostly affect the CGS operationally in terms of the effective and timely delivery of projects and services.

**Climate change:** Climate change is referred to as a change in average weather conditions or in the time variation of weather within the context of longer term average conditions and it is caused by various factors such as biotic processes, variations in solar radiation received by Earth, plate tectonics and volcanic eruptions. Greenhouse gas emissions from human activities are also believed to accelerate the rate of climate change. The members of the global nations have formed a coalition of the willing

---

<sup>18</sup> No. 42078 Government Gazette, 4 December 2018

and are in agreement to work towards limiting global temperature rise to well below 2 degrees Celsius. **<sup>4</sup>Rapidly growing cities and ongoing effects of climate change** are making more people vulnerable to rising sea levels. Two-thirds of the global population is expected to live in cities by 2050 and already an estimated 800 million people live in more than 570 coastal cities vulnerable to a sea-level rise of 0.5 metres by 2050. In a vicious circle, urbanisation not only concentrates people and property in areas of potential damage and disruption, it also exacerbates those risks — for example by destroying natural sources of resilience such as coastal mangroves and increasing the strain on groundwater reserves. Intensifying impact will render an increasing amount of land uninhabitable.

The CGS is implementing the Carbon Capture Utilisation and Storage (CCUS) project, which aims to curb the emissions of CO<sub>2</sub> and therefore reduce the nation's carbon footprint. Most importantly, the CGS is assessing the utilisation options where CO<sub>2</sub> and its outputs could be used for, among other, enhancement of geothermal energy generation, development of construction materials, enhanced coal-bed methane (ECBM). This approach not only is consistent with the stated intentions of the NDP2030, but also the IRP 2019.

The CGS will continue investigating interventions to reduce the quantities of greenhouse emissions such as possible storage options for carbon dioxide and identifying alternative sources of energy.

**Legislative:** The CGS is a creature of statutes and any changes to the legislative framework (see Section 3.2) will have a direct impact on the strategy and operations of the organisation.

In developing the five-year strategy for the CGS, these factors have been considered to enable the organisation to take full advantage of opportunities to adjust and navigate within the legislative framework to contribute to the creation of a prosperous society for all within South Africa.

Table 1 summarises the major strengths and weaknesses of the CGS as well as the major threats and opportunities facing the organisation.

**Table 1: CGS SWOT Analysis.**

	Strengths	Weaknesses
	<ul style="list-style-type: none"> <li>Support through Government grant funding through line Departments (i.e. DMRE)</li> <li>A sound historical heritage, investible geoscience data and information accumulated over a 100-year period as major strategic asset that can be leveraged to develop the economy of South Africa.</li> <li>Scientific research experience and strong knowledge base (generator of knowledge).</li> <li>Good understanding of the South African natural resources and environmental landscape.</li> <li>Empowering legislative mandate.</li> <li>Developer and incubator of pipeline of geoscience expertise through the bursary and internship programmes – contribution to human capital development and expansion of knowledge enterprise.</li> <li>Capacity to strengthen commercial/collaborative and Intellectual Property revenue generation</li> </ul>	<ul style="list-style-type: none"> <li>A limited capacity of highly qualified, experienced and skilled scientists near retirement.</li> <li>Inadequate access to external exploration data</li> <li>Limited utilisation of vast historical geological information.</li> <li>Semi-digital and disparate internal systems – delayed technical advancements</li> <li>A very low coverage of high-quality, integrated, multidisciplinary maps in South Africa for mineral exploration and infrastructure development.</li> <li>Lack of organisational growth due to intermittent supplementary funding (i.e. ring-fenced funding from MTEF projects).</li> </ul>
INTERNAL	Opportunities	Threats
	<ul style="list-style-type: none"> <li>Collaboration opportunities with various Government departments, science councils, international entities in geoscientific research as well as universities to facilitate regional integration and leverage on resources including human capital building, etc.</li> <li>Innovative utilisation of geoscientific information in various emerging fields such as medical geology and geomaterials through the priorities of the fourth industrial revolution.</li> <li>Transformation, growth and development of world-class scientists.</li> <li>Implement geoscience programmes to give effect to the National Development Plan priorities and respond to post Covid-19 economic recovery measures.</li> <li>Opportunity to leverage on programmes to support the just transition energy policy.</li> <li>Enhancing the advisory position of the CGS through Policy/legislation interventions.</li> </ul>	<ul style="list-style-type: none"> <li>Disruptive events such as the Covid-19 pandemic.</li> <li>Increased criminality that leads to increase in operational costs.</li> <li>Slow economic growth that threatens sustainable revenue generation.</li> <li>Funding of geoscience programmes across multiple state entities can lead to duplicative and uncoordinated work being performed).</li> <li>Inadequate integration and coordination across Government entities.</li> <li>Challenges of access to land to implement the geoscience programmes.</li> <li>Data and information security</li> </ul>
EXTERNAL		

### 7.1.5 Stakeholder Analysis

An effective stakeholder engagement strategy is a key requirement for the CGS: (1) to fulfil its legislative mandate and (2) to leverage optimal delivery through collaborative relationships that enhance and nurture the development of the geosciences.

The CGS is accountable to, and has to align with a wide network of internal and external stakeholders. The various functions within the organisation, both core and support, are interdependent and have to be aligned internally and across stakeholder groupings in order for the CGS to operate effectively in the execution of its mandate. Primary stakeholders include, but are not limited to Parliament of the Republic of South Africa, the DMRE, the National Treasury, the DSI, the employees, organised labour, service providers, communities and the broader South African public. The secondary stakeholders critical for the CGS include, amongst others, international geological survey organisations, geoscience organisations, institutions of higher learning, mining companies, media, and Non-Government. The CGS is a state-owned entity and, by extension, an instrument of Government that has been established to execute aspects of national foreign policy through bilateral agreements with other countries. Table 2 summarises the various stakeholder groupings of the CGS. In this regard, the Geoscience Diplomacy Programme of the CGS has been developed and implemented to coordinate strategic partnerships with stakeholders outside South Africa.

**Table 2: Stakeholder Analysis.**

External and Internal Stakeholders					
Stakeholder List	Characteristics/Attributes	Influence	Interest	Action Point to deliver on	*Linkages with other stakeholders (Direct / Indirect)
CGS Board	Social, Strategic and Political Partners	H	H	Keep Satisfied, Manage and inform	Direct
Parliament of South Africa		H	H	Keep Satisfied and Inform	Direct
DMRE		H	H	Keep Satisfied, Manage and Inform	Direct
Government and related Departments (e.g. DSI, National Treasury, DPME, DWS, DFFE, DALRRD, DHS, DTIC, Department: Tourism, DPWI, DIRCO, Economic Development Department), DHET), SANDF)		H	H	Keep Satisfied	Direct
Provincial Departments,		H	L	Manage Closely	Direct
Municipalities		H	L	Keep Satisfied, Manage Closely	Direct
Traditional Councils		H	L	Keep Satisfied, Manage Closely	Direct
Communities (Direct projects)		H	L	Keep Satisfied, Manage Closely	Direct
General Public		H	L	Keep Informed	Indirect
Media		H	H	Manage Closely and Inform	Direct
NGOs and Chapter 9 Institutions		H	L	Manage Closely	Direct
Nature Conservation Institutes		H	L	Manage Closely	Indirect
Regional Integration Partners, e.g. the African Union (AU) and the Organisation of African Geological Surveys (OAGS)		L	L	Keep Informed	Indirect
CGS Employees and Organised Labour		H	H	Keep Satisfied and Inform	Direct
Geological Surveys	Public and Private Institutions	L	H	Manage Closely	Direct
AU and Regional Structures, such as SADC		L	H	Keep Informed	Indirect

External and Internal Stakeholders					
Stakeholder List	Characteristics/Attributes	Influence	Interest	Action Point to deliver on	*Linkages with other stakeholders (Direct / Indirect)
Spatial Planning and Development Companies, Science Councils, Minerals Council South Africa (former Chamber of Mines), etc.		H	L	Keep Satisfied	Direct

Universities	Professional Institutions	L	H	Manage Closely	Direct
Research Institutions		L	H	Manage Closely	Direct
Geological Society of South Africa and similar Institutions		L	H	Manage Closely	Direct

\* Linkages with other stakeholders- Classification on how the different stakeholders have a direct / indirect linked impact to the work of CGS. H: High, L: Low

Various opportunities exist to strengthen stakeholder relations and to establish opportunities for networking, learning, alignment and integration. An initiative that the CGS could explore to strengthen stakeholder relations is the consideration of bi-annual stakeholder interventions — national, continental or international. These interventions would provide marketing platforms for the CGS to create visibility and awareness of the CGS, to disseminate information, and to showcase the current and planned work of the CGS.

The Intergovernmental Relations Framework Act (Act No. 13 of 2005) prescribes principles for the national government, provincial and local governments, and all organs of state to facilitate coordination in the implementation of policy and legislation, including, but not limited to the effective provision of services, monitoring the implementation of policies and legislation, and the realisation of national priorities. The Act makes provision for the establishment of intergovernmental structures for coordinating actions across government departments when implementing policies or legislation, for the execution of statutory functions (taking into account the circumstances, material interests and budgets of other government departments) and to consult, cooperate and share information to achieve the objectives of the Act.

An opportunity presents itself for the CGS to explore the potential for establishing an intergovernmental forum comprising key stakeholders (e.g. DMRE, DSI, DFFE, etc.). This forum would have the authority to establish rules and principles for the endorsement of cross-government departmental projects and programmes, and the approval of the transfer or allocation of resources (financial or otherwise) across departments in the execution of the integrated and multidisciplinary geoscience mapping programmes. The identified projects/programmes would support the achievement of national objectives, considering the collective mandates and functions of various Government departments. This would allow the CGS to access and/or share resources with other Government departments for projects and programmes that have to be funded and executed in national interest, enabling the optimal use of grant funding and other resources across departments, without additional demands on the fiscus.

## 7.2 Internal environment analysis

### 7.2.1 Overview of the CGS

The strategically re-oriented IMMP was adopted by the CGS Board in June 2017 and it purposefully focused on implementation of its mandate, as stipulated in the Geoscience Act, Act No 100 of 1993 and amended in 2010. The IMMP is developed to foster the sustainability of the organisation in a constantly changing state of polity, the economy, society and the ever-shifting scientific and technological landscape. This strategy is intended to maintain an impactful delivery of the core mandate. To provide

innovative geoscience solutions that respond to current and future societal challenges as well as national imperatives. It supports the NDP 2030 and other Government priorities that address economic growth, poverty, inequality, job creation, education, clean water, affordable and clean energy, and safer communities amongst others.

The IMMP strategy aims to map the land surface (both onshore and offshore) of South Africa at a greater level of detail, not only geologically, but also geophysically, geochemically and geotechnically to produce a new generation of more detailed maps to serve as a base to advise the State and various stakeholders, including the public. Marine geoscience mapping (offshore mapping) also feature prominently, in line with the objectives of marine Operation Phakisa. The IMMP priorities contributes to the ERRP and include but not limited to:

- Digitally migrate all geoscience data (Contributions to the digital economy)
- Facilitate growth of the exploration activities in SA to secure a minimum of 5% of the global exploration budget (Building South Africa's Minerals Resource Wealth)
- Catalysing the blue economy development, in line with the Oceans Operation Phakisa (through management of South Africa's Marine Jurisdictions)
- Securing future Energy resources (implementation of the IRP 2019)
- Contribute to an improved carbon capture technologies (for the reduction of greenhouse gas emissions and transition to a low carbon growth trajectory)
- Geoscience research that contributes to food security, infrastructure development, water and environment (Ensuring Community Safety, Land and Infrastructure Development and Securing South Africa's Water Resources).
- Improve African collaborations (contributions to African Continental Free Trade priority)
- Grow scientific skills (embracing the cross-cutting areas: women, youth and people with disabilities) to execute the IMMP (contributions to priority number 1 and 3)
- Embrace applications of the 4IR and AI in geosciences (leading geoscience innovation)

The GTP represents the technical programme model of the CGS that covers integrated projects taking into cognizance the interconnectivity of various geoscientific disciplines for an impactful contribution to the broad government mandated programmes. The CGS GTP is subdivided into five core themes and these include:

#### **1. Geoscience for Minerals and Energy:**

The South African Government pronounced on its bold plan to capture a minimum of 5% of the global exploration budget of approximately US\$10 billion (reduced to US\$6.8 billion because of the COVID-19 pandemic) per annum in the next three to five years. The CGS has a privilege of being placed at the leading edge of rejuvenating and re-imagining the exploration landscape, consistent with the quality of geology that suggests that the country remain a proverbial exploration frontier jurisdiction. Accordingly, The CGS participates in a number of DMRE led initiatives to provide necessary geoscientific/technical support sought to attain the afore-stated intention.

The contribution of the CGS to energy security and the "Just Energy Transition" policy tenet is located in the numerous projects that constitute the GTP of the CGS. These include the geothermal research potential, whose early results are yielding positive results of this prospect that will augment the sustainable renewable energy programme in the medium to long term. In addition, the characterisation of non-traditional coalfields, such as Molteno coalfields in the Eastern Cape, presents ideal opportunities for South Africa to explore production of hydrogen and REE from the development of coal resources, in a manner that embraces renewable energy and significantly mitigates the "carbon" footprint. Importantly, the CGS is also undertaking research and development toward the implementation of Carbon Capture, Utilisation and Storage technologies in South Africa. This programme aims to ensure that South Africa meets its climate

change mitigation scenarios, while still enabling the support and growth of the hydrocarbon sector.

Progress on implementation of this thematic area of the CGS technical programme, albeit at early stages of deployment, gives sufficient confidence that the much needed inclusive economic growth, coupled with the energy security needs of the country can re-catalysed and attained with the support of the CGS's technical programmes contributing to such this intent.

## **2. Geoscience for Health, Groundwater and Environment:**

The CGS fulfils its advisory role to the DMRE on promotion of environmental stewardship. To this extent, twenty five (25) high-risk unsafe mine openings have been sealed by the end of 2020/2021 FY, while the CGS has also restructured what is colloquially duped the D & O project in order to exclusively focus on the research of impact induced by the orphaned mines on society and advise the State on apposite corrective action to be taken. The redesign has brought an opportunity for the CGS to strengthen the research aspect that includes integrated monitoring (air, soil, water, etc.) around legacy mines, mineral assessments for future mining of dumps and resuscitating local economies of historical mining towns. The Mine Water project has completed the construction of the Van Ryn Canal as an ingress control measure. The work done, which includes passive treatment piloting, coexistence of mining and biodiversity, will continue in the couple of years (at least).

The CGS developed innovative machine learning techniques that use the integrated and multidisciplinary geoscience datasets to map groundwater resources. These techniques were successfully tested in the Maluti-a-Phofung project to site and drill a high-yielding well for the communities in the area. These innovative techniques are now being used to undertake critical groundwater research in the surrounding regions facing water challenges.

## **3. Geoscience for infrastructure and land use:**

The CGS has a mandate to continue mapping the extent of areas that are susceptible to subsidence, such as in dolomitic rock, which knowledge is used to advise the State on its infrastructure development and optimal land use options. The extent of dolomitic layers nationally continued to be delineated using known boreholes. Artificial intelligence tools have been developed to predict the development of subsidence in dolomitic areas. The CGS' national geohazard mapping programme focuses on mapping landslides potential at city scale in order to assist municipal spatial planning efforts. The national seismic network continues to detect natural and mining-induced earthquakes in South Africa on a continuous 24-hour basis.

## **4. Geoscience for innovation**

The CGS is steadily strengthening its scientific innovation capacity in all areas of the geosciences. Models have been produced from machine learning algorithms to develop predictive capabilities in areas such as geohazards (subsidence), mineral, benthic habitats and water mapping.

## **5. Geoscience for Diplomacy**

As the permanent Secretariat of the Organisation of African Geological Surveys (OAGS), the CGS promotes the development of close relations between African member states in geoscience research. The OAGS represents the interests of African geological surveys at international platforms and continues its close collaboration with the European Geological Surveys in implementing the PanAfGEO programme that specifically envisages capacity building across the African continent.

The CGS has renewed collaboration with the Namibian and Malawian geological surveys for the implementation of high-resolution geological mapping projects. These initiatives entail strong elements of training and skills transfer for human capital development.

**Geoscience mapping coverage:**

- ***Onshore mapping coverage***

Geoscience mapping at various scales is a core discipline at the CGS. The detailed onshore national mapping programme at a scale of 1:50 000 has increased coverage from 5% to 9.03% by the end of FY2020/21.

- ***Offshore mapping coverage***

The importance of the marine environment is recognised as part of the Oceans Phakisa Blue Economy. The marine mapping programme is critical to development of the marine economy and the CGS has accordingly prioritized the multi-disciplinary geoscience mapping of the Economic Exclusion Zone (EEZ) in the short term. This work aims to gain a clear understanding of marine geoscientific processes on the continental shelf (in selected deep seabed strategic areas) as they relate to energy, mineral, climate change initiatives and matters related to ocean governance. The offshore geoscience map coverage has increased by 0.05% by the end of FY2020/2021.

The CGS not only implements its mandate empowered by the Geoscience Act, Act No 100 as amended, but also engages in collaborative projects typically characterised as follows:

- Agency projects: Sourced from other government departments/institutions and public entities;
- Private sector: Collaboration with private sector establishments.

Further to this, the CGS continued to implement mandatory projects to actualise the specific provisions of the Amendment Geoscience Act, Act No 16 of 2010 (e.g., development and maintenance of the national core library, geophysical reference sites) and the successful management of a number of national geoscience facilities, including:

The national seismic network, which monitors seismic activity locally and globally;

- monitoring of the global infrasound activity as part of its collaboration with the Comprehensive Nuclear-Test-Ban Treaty Organisation (CTBTO);
- The national core library, which provides a comprehensive collection of valuable geological materials. The core library has added to its capacity hyperspectral scanning capability;
- The national geoscience museum, which provides information and preserves rare, scientifically valuable and geological heritage samples;
- The national geoscience library and bookshop, which provide geological publications and maps to the public, and
- The national geoscience analytical facility, which is available for the analysis among others, geological samples, water samples and industrial raw materials.

## 7.2.2 CGS Operating Model

The CGS operating model is informed by the preceding sections of this document and summarises the integrated approach required for the effective execution of the CGS mandate. It summarises the core functions in line with the mandate of the CGS, business model that allows both statutory and collaborative activities as well as other streams of revenue generation, legislative processes, procedures and conventions (triggers) that have to be complied with, enablers that will mobilise execution of the work of the CGS and established interfaces that direct, provide focus and support the work of the CGS.

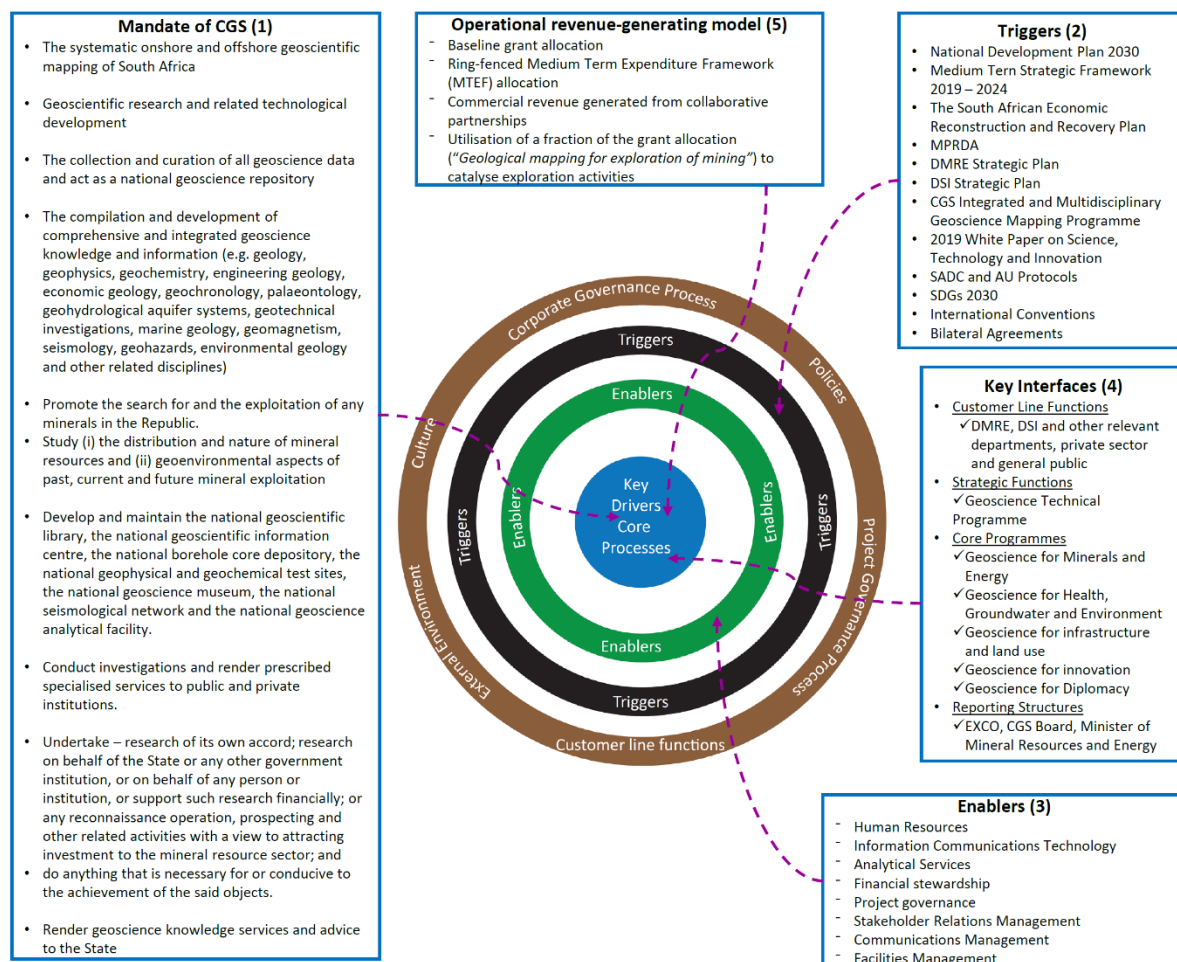

Figure 6: CGS Operating Model.

### **7.2.3 CGS Organisational environment**

The CGS continues realigning its organisational structure (Figure 7) to streamline its core business portfolios for improved efficiency and service delivery as per the adopted strategy. This intended to achieve its institutional outcome of enhanced applications of geoscience products, which span the five thematic strategic focus areas (see previous section 4.2.1).

In respect of Information Communications Technology (ICT): The CGS is continuously implementing a cost-effective and efficient data centre and infrastructure, which is a crucial element of the CGS's digital transformation.

The CGS has made significant strides in terms of the representation of females, youth and people living with disabilities. Notably, female staff represent 39% of the scientific cohort with African females making up 71%. The representation of people living with disabilities is at 2.25%, which is at an all-time high over the past 5 years due to the in-house disability awareness campaign which encouraged employees to disclose their disabilities. Youth represent 30% of the workforce.

### **7.2.4 CGS Governance**

#### **The Board**

The CGS Board which is the Accounting Authority appointed by the Minister of Mineral Resources and Energy approves the strategies, goals, operating policies and priorities of the organisation and monitors compliance with the policies and achievements with respect to scientific, administrative and financial objectives. The Board Members bring independent counsel on strategic decisions. Moreover, Board Members are fully conversant with their fiduciary duties, as outlined in section 50 of the PFMA (Act No. 1 of 1999).

Four Board Committees underpin the Board:

- Finance;
- Technical;
- Personnel, Remuneration and Transformation;
- Audit and Risk.

#### **Finance Committee**

The Finance Committee of the CGS is mandated to consider and recommend for the Board's approval the following matters:

- Significant financial activities;
- Liquidity and financial condition of the CGS;
- Write-off of bad debts;
- Material variances in the approved annual and/or revised budgets in accordance with the Materiality and Significance Framework Plan;
- Proposed capital and operating budget for capital expenditures;
- Financial statements for the annual report;
- All policies that have financial implications, and
- Corporate performance information management against the approved budget.

#### **Technical Committee**

The Technical Committee of the CGS is mandated to consider and recommend for the Board's approval the annual scientific and strategic technical programme of the organisation, evaluate the scientific and technical output and oversee the implementation of the ICT strategy as well as the End-term evaluations.

### **Personnel, Remuneration and Transformation Committee**

The Personnel, Remuneration and Transformation Committee is mandated to consider and recommend for the Board's approval the human resources strategies and policies of the CGS. It also considers and recommends for the Board's approval the organisational remuneration model, remuneration for executive management and annual salary increases, and evaluates and makes recommendations on the payment of performance bonuses. The committee also considers organisational performance reports on labour-related matters, employment equity, and employee training and development matters.

### **Audit and Risk Committee**

The Audit and Risk Committee was established in terms of Section 77 of the PFMA and National Treasury Regulation 27. The Audit and Risk Committee discharges its responsibilities in terms of the Audit and Risk Committee Charter, which sets out its committee composition, roles and responsibilities. The Audit and Risk Committee continually monitors the quality and reliability of CGS financial information used by the Board, financial statements issued by the CGS and various functions in the organisation. The Audit and Risk Committee ensures that emerging risks are timeously identified and that appropriate and effective control measures are put in place to mitigate these risks.

### **The Management**

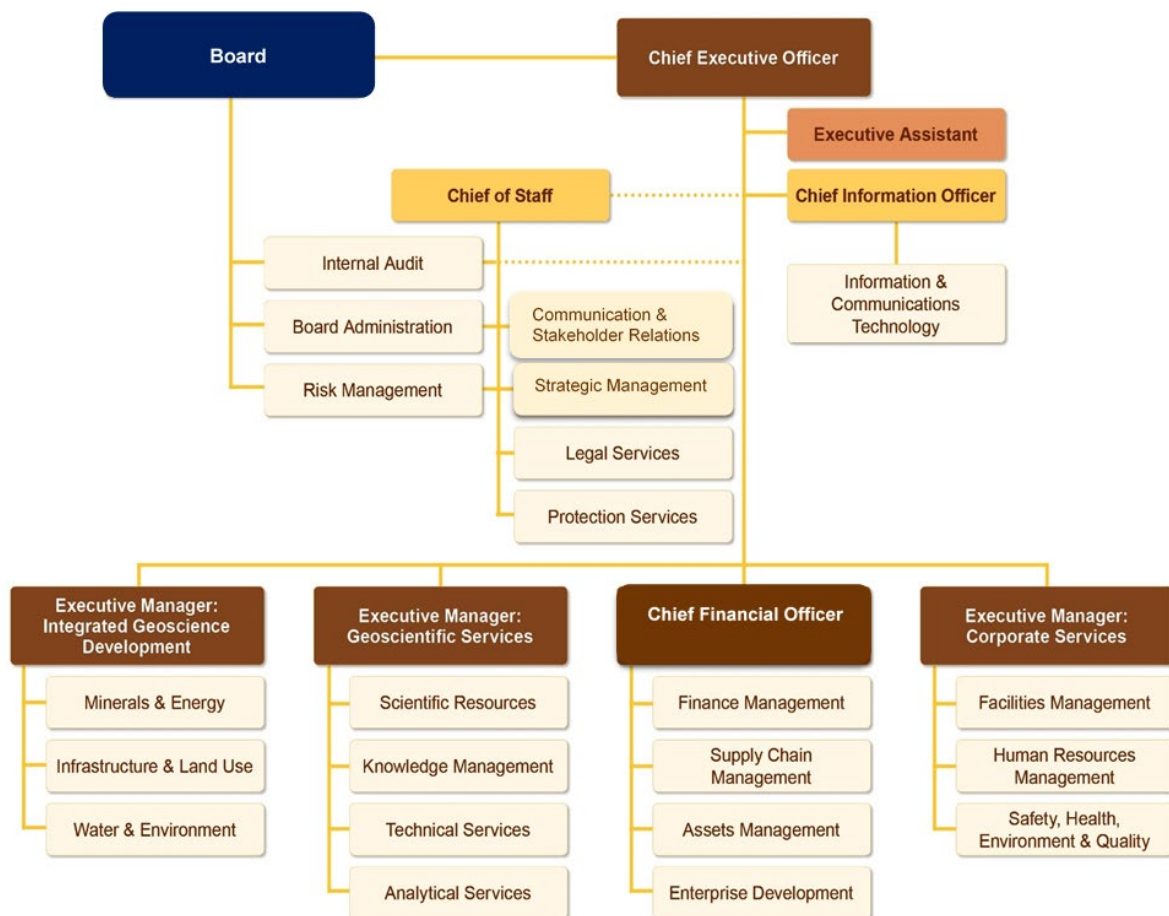

Managers are responsible for the following functions in the organisation:

- Development of the strategic plans and annual performance plans of the CGS for approval by the Accounting Authority;
- Implementation of annual performance plans;
- Management of legal, regulatory, ethical and other compliances;
- Management of CGS operations and service delivery;
- Management of corporate administration;
- Management of corporate performance;
- Management of finances;
- Management of personnel;
- Management of transformation;
- Promotion of the CGS.

In terms of the Code of Ethics and Conduct, all persons serving on behalf of the CGS are required to uphold the highest standard of business ethics and integrity. Furthermore, all staff, contractors, consultants and others acting on behalf of the organisation are required to accurately and honestly represent the organisation and to refrain from engaging in any activity or scheme intended to defraud anyone of money, property or services. The reputation and integrity of the CGS are central to its ability to operate as an effective state-owned organisation.

### 7.2.5 CGS Organisational Structure

Figure 7 depicts the organisational structure of the CGS that was developed to support the efficient, effective, robust functioning of the organisation as well as service delivery.

**Figure 7:** CGS's Organisational Structure.

## PART C: MEASURING OUR PERFORMANCE

### 8. Measuring the Impact

<b>Impact statement</b>	A prosperous and transformed society enabled by geoscience solutions.
-------------------------	---

#### 8.1 Measuring Outcomes

Outcomes	Outcome indicators	Baseline	Five-year target
<b>MTSF Priorities</b>	<b>Priority 1: A capable, ethical and developmental state</b>		
1. Effective and efficient financial resources management	1. Absence of material audit findings	0	Clean audit attained by 2025
2. Compliance with governance protocols/regulations	2. An organisation compliant with relevant prescripts	New indicator	100% compliant organisation by 2025
<b>MTSF Priorities</b>	<b>Priority 3: Education, skills and health</b>		
3. Capable human capital	3. Talent management framework to build, nurture and sustain a capable workforce implemented	New indicator	An empowered, transformed, motivated and capacitated workforce by 2025

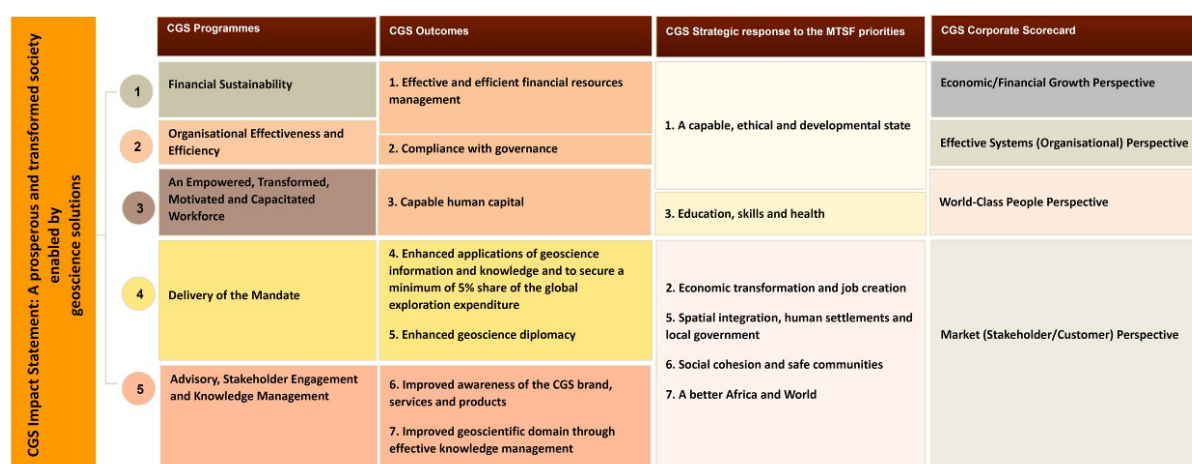

Note: Baseline data for the outcome indicator on absence of material audit findings is from the Audited Annual Report for the Financial Year (FY) 2018/19.

Outcomes	Outcome indicators	Baseline	Five-year target
<b>MTSF Priorities</b>	<b>Priority 2: Economic transformation and job creation</b> <b>Priority 5: Spatial integration, human settlements and local government</b> <b>Priority 6: Social cohesion and safe communities</b>		
4. Enhanced applications of geoscience information and knowledge and to secure a minimum of 5% share of the global exploration expenditure	4. Increased onshore geoscience map coverage	New indicator	16%
	5. Increased offshore geoscience map coverage	New indicator	0.6%
	6. Implementation of the Geoscience Technical Programme (GTP) for minerals, energy, groundwater, infrastructure, land use, innovation and the environment	New indicator	Applications of geoscience knowledge towards societal development
5. Improved awareness of the CGS brand, services and products	7. Integrated Communication and Stakeholder Relations Strategy implemented	New indicator	Satisfied stakeholders with the quality of CGS services and products
6. Improved geoscientific domain through effective knowledge management	8. Utilisation of the integrated geoscience information management system	New indicator	A proficiently managed geoscience data and information by 2025
<b>MTSF Priorities</b>	<b>Priority 7: A better Africa and World</b>		
7. Enhanced geoscience diplomacy	9. International strategic partnerships established	New indicator	Geoscience contribution towards "a better Africa and the World" strengthened by 2025

## 8.2 Explanation of planned performance over the five-year planning period

The CGS strategy (the IMMP) has been adopted to encourage sustainability of the organisation in a changing state of polity, the economy, society, as well as the scientific and technological landscape. Therefore, the strategic programmes of the CGS illustrated below in Figure 8, are intended to shift the strategic orientation of the CGS to maintain an impactful delivery of the core mandate that will result in the improvement in the economy and the lives of South Africans. The balanced scorecard (BSC) methodology has been embraced to provide an account of the overall performance of the organisation. The BSC essentially measures the performance of the organisation at corporate business unit and individual level. The five strategic programmes of the CGS cover the customer, internal business process, learning and growth and financial perspectives. They are aligned to the NDP 2030 as well as the MTSF 2019-2024 priorities and addresses the cross-cutting areas for women, youth and people with disabilities.

**Figure 8:** The alignment of CGS Strategic Programmes and Outcomes to the priorities of the MTSF 2019-2024 as well as the BSC.

The CGS plans of achieving its impact “A prosperous and transformed society enabled by geoscience solutions” is anchored on the following institutional outcomes that will be pursued over the five-year period.

### Outcome 1: Effective and efficient financial resources management

In order to achieve the above outcome, the CGS will continue to maintain effective, efficient and transparent systems of financial, risk management and internal control. The financial statements are prepared in accordance with the Standards of Generally Recognised Accounting Practice (Standards of GRAP) and the requirements of the Public Finance Management Act of South Africa, 1999 (Act No. 1 of 1999) (PFMA). Controls have been implemented to ensure a responsible management of assets, revenue, expenditure and liabilities. The established SCM function will ensure an appropriate procurement and provisioning system, which is fair, equitable, transparent, competitive and cost-effective. Through its Internal Audit and Risk Management functions, the CGS is able to monitor the effectiveness of the internal controls and assess the financial management controls as well as mitigate financial misconduct such as fraud, theft, irregular expenditure, fruitless and wasteful expenditure.

### Outcome 2: Compliance with governance protocols/regulations

Compliance with governance protocols and regulations and other relevant prescripts is crucial for the CGS, as it will contribute towards Priority 1 of the MTSF, i.e. ‘A capable, ethical and developmental state’. In order to achieve an acceptable level of compliance the CGS aims to improve and further

develop the compliance management maturity by putting the necessary policies and procedures in place to achieve the target of a fully compliant organisation by 2025. CGS operates in a complex environment and a regulatory universe (the list of all prescripts CGS has to comply with) is diverse and extensive. Compliance will be achieved in a structured and systematic manner that is integrated into operations.

### **Outcome 3: Capable human capital**

As a science council, the competitive advantage of the CGS lies in the competence of its workforce. In order to ensure that the organisation attracts, retains, engages and develops the right talent in the right positions, the CGS has developed a talent management framework to build, nurture and sustain a capable workforce by end of the MTSF period. The Talent Management framework will be responsive to the short, medium and long-term exigencies of the business as informed by the workforce planning.

### **Outcome 4: Enhanced applications of geoscience information and knowledge and to secure a minimum of 5% share of the global exploration expenditure.**

The CGS adopted the IMMP strategy, which aims to contribute in securing a minimum of 5% of global the exploration expenditure using the applications of geoscience information and knowledge generated from the programme. The implementation of the GTP, which is the primary tool to realise the strategy will unlock South Africa's mineral and energy resource potential and contribute to the just transition to a low carbon economy. The GTP will provide critical geoscience data and information including the application of artificial intelligence techniques to support sustainable infrastructure development, judicious land use, environmental stewardship as well as other plans and initiatives of Government (e.g. District Development Model and ERRP). The CGS aims to provide **pre-competitive geoscience data**, information and knowledge to exploration/mining houses in order to attract investment in minerals/energy sector. The CGS will participate in minerals investment workshops and conferences to showcase value-added products and promote mineral investment opportunities in South Africa. In addition, the CGS will be forming strategic partnerships with key stakeholders, including but not limited to, minerals exploration companies, district municipalities and national governments in order to provide advice on how to develop the minerals sector

### **Outcome 5: Improved awareness of the CGS brand, services and products.**

For the CGS to improve its brand awareness, services and products, the efficient implementation of the Integrated Communication and Stakeholder Relations Strategy (ICSR) is crucial. The CGS is in the next five years committed to implementing the approved ICSR as well as to monitoring the growth of its brand utilising various tools that include but are not limited to stakeholder surveys.

**Outcome 6: Improved geoscientific domain through effective knowledge management.**

The critical role of the CGS as a national custodian of all geoscience data and information requires a seamless and accessible geoscience information and knowledge management system, which will allow effective decision making on, amongst others, sustainable management of natural resources as well as mitigating the impacts of geohazards and adverse environmental impacts. The optimal utilisation of the information management system will position the organisation to implement the Geoscience Data and Information Policy including the Regulations of the Geoscience Act. The CGS is implementing the Integrated Geoscience Solution which requires ICT infrastructure for effective knowledge management.

**Outcome 7: Enhanced geoscience diplomacy.**

The CGS aims to enhance diplomatic relations through collaborative geoscience programmes to enable a better Africa and the world, which is in alignment with the SDGs 2030 and Agenda 2063. Some of the geoscience programme include human capital development, institutional reform, administrative and managerial/leadership skills and implementation of other mutually agreed programmes. The relationships will contribute to the realisation of the investment-led African Continental Free-Trade Agreement and increase the global footprint of the CGS, supportive of the national foreign policy predisposition.

### 8.3 Key risks and mitigations

Outcomes	Key risks	Contributing factors	Risk mitigations
<b>1. Effective and efficient financial resources management</b>	Inadequate funding to implement the mandate	<ul style="list-style-type: none"> <li>• Misalignment between short term funding and long term strategy</li> <li>• Insufficient and declining baseline grant allocation</li> <li>• Reduced commercial/ collaborative income generation due to constrained economic activities</li> </ul>	<ul style="list-style-type: none"> <li>• Request for and exploring sustainable funding for CGS.</li> <li>• Intensify business development efforts.</li> <li>• Enhanced financial management efficiencies and stewardship.</li> </ul>
<b>2. Capable human capital</b>	Failure to deliver on the CGS mandate and meet stakeholder needs	<ul style="list-style-type: none"> <li>• Inadequate talent management.</li> <li>• Misalignment between short term funding for positions and long term strategy</li> <li>• Inadequate specialised skills to deliver on the mandate</li> </ul>	<ul style="list-style-type: none"> <li>• Attract, develop and retain requisite skills.</li> </ul>
<b>3. Improved geoscientific domain through effective knowledge management</b>	Inadequate ICT support and security services	<ul style="list-style-type: none"> <li>• Non-integrated systems and databases</li> <li>• Inadequate knowledge repository</li> <li>• Inadequate assimilation of data from industry</li> </ul>	<ul style="list-style-type: none"> <li>• Implement the enterprise resource planning system.</li> <li>• Provision of ICT infrastructure to enable data collection from industry.</li> <li>• Implement document management system.</li> </ul>
<b>4. Enhanced applications of geoscience information and knowledge and to secure a minimum of 5% share of the global exploration expenditure.</b>	Non-delivery of the mandate	<ul style="list-style-type: none"> <li>• Misalignment of the GTP with government priorities.</li> <li>• Insufficient support to government priorities</li> <li>• Insufficient funding to execute the mandate</li> </ul>	<ul style="list-style-type: none"> <li>• Align the GTP to the government priorities and fully implement the integrated approach.</li> </ul>
<b>5. Improved awareness of the CGS brand, services and products</b>	Insufficient brand communication and insufficient stakeholder awareness	<ul style="list-style-type: none"> <li>• Uncoordinated implementation of stakeholder engagement plan / programme.</li> <li>• Incomplete stakeholder database and centralised recording of stakeholder engagements</li> <li>• Inadequate communication and stakeholder relations strategy</li> </ul>	<ul style="list-style-type: none"> <li>• Continuous implementation of communication and stakeholder relations plan.</li> <li>• Purposeful, intentional and focused key communication messages.</li> </ul>

Outcomes	Key risks	Contributing factors	Risk mitigations
<b>6.Enhanced geoscience diplomacy</b>	Inability to form collaborative international partnerships	<ul style="list-style-type: none"> <li>• Changes in geopolitical environment</li> <li>• Changes in international policy and economies</li> <li>• Global pandemics</li> </ul>	<ul style="list-style-type: none"> <li>• Intensification of monitoring and evaluating the geo-political landscape to identify appropriate collaborative opportunities.</li> </ul>
<b>7.Compliance with governance protocols/regulations</b>	Non-Compliance with legal and regulatory requirements	<ul style="list-style-type: none"> <li>• Insufficient advocacy and awareness of the regulatory protocols.</li> <li>• Ineffective enforcement and monitoring of regulatory requirements</li> <li>• Inadequate ethical culture</li> </ul>	<ul style="list-style-type: none"> <li>• Improve the compliance checklist, monitoring process and reporting on key legislation.</li> <li>• Establish a plan with specialised external trainers on risk, compliance and fraud awareness.</li> <li>• Increase awareness of policies and regulatory requirements at quarterly staff meetings and induction sessions.</li> </ul>

## 9. Public entities

Name of public entity	Mandate	Outcomes
Not Applicable		

**PART D: TECHNICAL INDICATOR DESCRIPTIONS (TIDs)**

<b>1. Outcome Indicator Title</b>	<b>Absence of material audit findings</b>
Definition	Absence of findings that are classified as material in the audit report of the Auditor-General
Source of data	Audit report issued by the Auditor General
Method of calculation or assessment	Simple count of material findings reported in the audit report by the Auditor-General
Assumptions	Annual external audit
Disaggregation of beneficiaries (where applicable)	Target for women: N/A Target for youth: N/A Target for people with disabilities: N/A
Spatial transformation (where applicable)	N/A
Desired performance	Zero material audit findings
Indicator responsibility	Chief Financial Officer
<b>2. Outcome Indicator Title</b>	<b>An organisation compliant with relevant prescripts</b>
Short definition	Absence of transgressions and instances of non-adherence to prescripts as defined in the regulatory universe
Source / collection of data	Compliance checklists based on the regulatory universe
Method of calculation or assessment	Simple count of incidences of non-adherence on the compliance checklists
Assumptions	Approved regulatory universe
Disaggregation of beneficiaries (where applicable)	Target for women: N/A Target for youth: N/A Target for people with disabilities: N/A
Spatial transformation (where applicable)	N/A
Desired performance	100% compliance
Indicator responsibility	Manager: Risk Management
<b>3. Outcome Indicator Title</b>	<b>Talent management framework to build, nurture and sustain a capable workforce implemented</b>
Short definition	Implementation of the talent management framework is an instrument for planning, acquisition, development and retention of human capital in line with business exigencies.
Source / collection of data	HR report
Method of calculation or assessment	Final and approved talent management framework
Assumptions	The training will have a positive impact (return on training investment) Availability of financial and human resources
Disaggregation of beneficiaries (where applicable)	Target for women: 50% Target for youth: 20% Target for people with disabilities: $\geq 1.5\%$
Spatial transformation (where applicable)	N/A
Desired performance	An empowered, transformed, motivated and capacitated workforce by 2025
Indicator responsibility	Executive Manager: Corporate Services
<b>4. Outcome Indicator Title</b>	<b>Increased onshore geoscience map coverage</b>
Short definition	Incremental coverage on onshore geoscience maps
Source / collection of data	Geoscience Technical Programme
Method of calculation or assessment	Count the number of onshore geoscience maps produced within the reporting period added to maps produced in preceding years (such as geology, geophysics and geochemistry) divided by the total number of map tiles (same scale) covering South Africa's onshore territory X100
Assumptions	Availability of financial and human resources Seamless access to land Favourable health, safety and environmental conditions
Disaggregation of beneficiaries (where applicable)	Target for women: N/A Target for youth: N/A Target for people with disabilities: N/A
Spatial transformation (where applicable)	N/A
Desired performance	Achieve targeted map coverage
Indicator responsibility	Executive Manager: Integrated Geoscience Development
<b>5. Outcome Indicator Title</b>	<b>Increased offshore geoscience map coverage</b>

Short definition	Incremental coverage on offshore geoscience maps
Source / collection of data	Geoscience Technical Programme
Method of calculation or assessment	Count the number of offshore geoscience maps produced within the reporting period added to maps produced in preceding years (such as geology and geophysics) divided by the total number of map tiles (same scale) covering South Africa's offshore territory X 100
Assumptions	Availability of financial and human resources Favourable health, safety and environmental conditions Continuity of strategic partnerships for the offshore programme
Disaggregation of beneficiaries (where applicable)	Target for women: N/A Target for youth: N/A Target for people with disabilities: N/A
Spatial transformation (where applicable)	N/A
Desired performance	Achieve targeted map coverage
Indicator responsibility	Executive Manager: Integrated Geoscience Development
<b>6. Outcome Indicator Title</b>	<b>Implementation of the Geoscience Technical Programme (GTP) for minerals, energy, groundwater, infrastructure, land use, innovation and the environment</b>
Short definition	Geoscience Technical Programme (GTP) is an implementation tool for the Integrated Geoscience Mapping Programme strategy and it includes projects that are conceptualised and implemented across the thematic areas (minerals, energy, groundwater, infrastructure, land use, innovation and the environment). The GTP is also an instrument to enhance applications of geoscience information and knowledge and to secure a minimum of 5% share of global exploration expenditure.
Source / collection of data	Geoscience Technical Programme
Method of calculation or assessment	Completion of the implementation of the GTP
Assumptions	Availability of financial and human resources Seamless access to land Favourable health, safety and environmental conditions Continuity of strategic partnerships for the offshore programme
Disaggregation of beneficiaries (where applicable)	Target for women: N/A Target for youth: N/A Target for people with disabilities: N/A
Spatial transformation (where applicable)	N/A
Desired performance	Applications of geoscience knowledge towards societal development
Indicator responsibility	Executive Manager: Integrated Geoscience Development
<b>7. Outcome Indicator Title</b>	<b>Integrated Communication and Stakeholder Relations Strategy implemented</b>
Short definition	Integrated communication and stakeholder relations strategy is a guiding framework that coordinates the implementation of the marketing, communications and stakeholder relations activities.
Source / collection of data	Stakeholder survey report
Method of calculation or assessment	Percentage level of satisfaction attained in the stakeholder survey report
Assumptions	Willingness of stakeholders to participate in the survey
Disaggregation of beneficiaries (where applicable)	Target for women: N/A Target for youth: N/A Target for people with disabilities: N/A
Spatial transformation (where applicable)	N/A
Desired performance	Satisfied stakeholders with the quality of CGS services and products
Indicator responsibility	Manager: Communications & Stakeholder Relations
<b>8. Outcome Indicator Title</b>	<b>Utilisation of the integrated geoscience information management system</b>
Short definition	Utilisation of the integrated geoscience information management system for decision-making, and for the coordination, control, analysis, and visualisation of geoscience information and data at the CGS.
Source / collection of data	Integrated geoscience information management system
Method of calculation or assessment	Simple count the number of integrated geoscience information management systems utilised
Assumptions	Availability of financial and human resources
Disaggregation of beneficiaries (where applicable)	Target for women: N/A Target for youth: N/A Target for people with disabilities: N/A
Spatial transformation (where applicable)	N/A

Desired performance	A proficiently managed geoscience data and information
Indicator responsibility	Executive Manager: Geoscientific Services
<b>9. Outcome Indicator Title</b>	<b>International strategic partnerships established</b>
Short definition	Establishment of international strategic partnerships in a form of agreements, alliances and other manifestations for the enhancement of the national diplomatic relations as well as increasing the global footprint.
Source / collection of data	Register of international strategic partnerships
Method of calculation or assessment	Simple count the number of signed international agreements (examples: agreements such as MoUs, MoAs and SLAs) for the reported period
Assumptions	Appetite for international collaboration
Disaggregation of beneficiaries (where applicable)	Target for women: N/A Target for youth: N/A Target for people with disabilities: N/A
Spatial transformation (where applicable)	N/A
Desired performance	A performance better than the target is desirable
Indicator responsibility	Manager: Communications & Stakeholder Relations

## **ANNEXURES**

There are no annexures attached to this document.

**Council for Geoscience**

**MINISTER  
MINERAL RESOURCES AND ENERGY  
REPUBLIC OF SOUTH AFRICA**

Private Bag X59, Arcadia, 0007, 71 Trevenna Campus, Building 2C 4<sup>th</sup> Floor, Cnr Francis Baard and Meintjies Street, Sunnyside, Tel (+27 12) 444 3999,  
Private Bag X9111, Cape Town, 8000, 7<sup>th</sup> Floor, 120 Plein Street, Cape Town. Tel (+27 21) 469 6400, Fax (+27 21) 461 0859

**Dr H Mathe**

The Chairperson  
Council for Geoscience  
PRIVATE BAG X112  
**PRETORIA**  
**0001**

Dear Dr Mathe

**APPROVAL OF THE COUNCIL FOR GEOSCIENCE (CGS) STRATEGIC PLAN (2020-25)  
AND ANNUAL PERFORMANCE PLAN WITH BUDGET FOR 2023-24 FINANCIAL YEAR.**

The CGS Strategic Plan and its 2023-24 Annual Performance Plan (APP) with budget bear reference.

This serves to inform you I have approved the CGS Strategic plan and APP with budget for 2023-24 financial year in terms of section 30.2.3 of the Treasury Regulations issued in terms of the Public Finance Management Act (PFMA) Act no 1 of 1999 as amended.

The approved aforesaid Strategic Plan and Annual Performance Plan will be used as the basis to quarterly monitoring and evaluating CGS's performance against planned targets, and where necessary to implement the corrective actions.

The Department is concerned that the CGS programmes structure is not aligned with the approved budget structure (ENE database). The mid-term review of the CGS APP must clearly articulate the expected outputs for the CCUS project, so as to enable proper monitoring.

Should the council require more information and/or clarity, kindly contact the Chief Director: State Owned Entities Oversight, Mr. Lloyd Ganta on 012 406 7468 or [lloyd.ganta@dmre.gov.za](mailto:lloyd.ganta@dmre.gov.za).

Yours sincerely

  
**MR SG MANTASHE, MP**  
**MINISTER OF MINERAL RESOURCES AND ENERGY**

**DATE:** 20/03/2023
