NATIONAL CLIMATE CHANGE RESPONSE WHITE
 PAPER 2011

Hello Ms T Madubela

thank you for the opportunity that you have given us
 citizens to respond about climate change

first let me give you the platform from which I speak on
 this matter

I hold a degree in agriculture from the university of
 stellenbosch. I did commercial farming for 30 years
 before retireing feb 2010. since retireing I have had the
 time to track the subject of global warming and climate
 change. this included among other sources the Al Gore
 inconvinient truth and National Geographic 6 degrees

the situation is actualy more DESPERATE than what most
 people realize and or would like to admit. I therefore make
 the following RADICAL suggestions WHICH IF ARE NOT
 IMPLEMENTED AS SOON AS POSSIBLE BY EVERYONE
 ON PLANET EARTH WILL SURELY LEAD TO THE
 EXTINCTION OF THE HUMAN RACE BEFORE THE
 TURN OF THE CENTUARY

1) Eskom to move away from using fossil feuls
 IMMEDIATLEY. from today ALL new power stations are
 to be either wind, solar or hydro renewable green energy.
 everytime one of these green power stations comes into
 production and existing coal fired power station is to be
 shut down until there are NO coal fired stations left

2] Government is to IMMEDIATLEY commission the use of
 alternative feuls for cars such as the hydrogen feul cell
 technology or even just driven by normal electric bateries. the moment clean green feuls are available
 government is to FORCE car manufacturers to make
 only those kind of cars that run on clean green feul.
 these technologies can be developed for trucks and
 ships aswell

in the interim period government is to BAN passanger
 vehicles from having an egine size bigger than 2000cc
 and give tax payers a rebate for having an engine size
 smaller than 2000cc

THE ABOVE TWO WILL BRING THE BURNING OF
 FOSSIL FEULS TO A HALT

3] the fact of the matter is that planet earth is hopelessly
 overpopulated, what most people dont realize is that the
 planet is capable of sustaining only " X " amount of people.
 that " X " amount of people has been exceeded and the

planet is now into " overload " and as we know anything that is run in overload continuously BREAKS DOWN.

if a truck breaks down from overload it can be fixed, when planet earth breaks down IT CANT BE FIXED !!

government is therefore to regulate population growth as is done in China, one family one child, those families that succeed in having no children get a tax rebate

4] a curriculum to be introduced into schools IMMEDIATELY to teach children about global warming and climate change and how to change human behaviour to AVOID IT AND HELP REVERSE THE CURRENT CLIMATE CHANGE CONDITION

5] government to IMMEDIATELY make it a condition of possessing a broadcasting licence that the broadcaster is to run adverts and programmes educating the public about global warming climate change and how to change their behaviour patterns and life styles to adapt to this potentially life threatening condition on earth

if I were the government I would most certainly take these drastic measures RIGHT NOW. the time for sitting on the fence and sitting in denial about the condition and fooling around HAS LONG GONE, WE HAVE TO ACT DECISIVELY IMMEDIATELY !!!

I hope my input has been of value to you

regards
