The government is busy taking from the poor citizen of this country with this e-tolling . The public transport in South Africa is not reliable since the operators are always on strike, we pay tax, we pay vat the government is also getting some percentage on a liter of petrol where does all this money go to, JMPD alone claimed the income of R31million a month from the traffic fines where does all this money go to, for me to drive a car from and to work doesn't make me a rich person, I am running away from public transport which will make me to lose my job, because of their strike, we voted for government to make our lives better not to rip us by paying for E-tolling.
