# In Gauteng Province upgrading entailed only installation of ramps and rails

\* In the Western Cape Province, in addition to 13 full-service/inclusive schools that received infrastructure upgrades for accessibility funded from the Expansion of Inclusive Education budget, the Infrastructure Directorate has reported that 13 new and replacement schools have been built from 2012 to 2014 with accessibility features incorporated into the design of all of these schools. It is not possible, however, to give a breakdown of the costs of these accessibility features as it was integral to the planning.
